

Amka Tsendjargal

Software Developer

Calgary, AB | amka150@gmail.com | (587)-891-3710 | <https://www.linkedin.com/in/amka-tsendjargal/>

Experience

Software Developer, OGL Engineering

June 2025 - Current

- Built 10+ FastAPI endpoints in Python to replace complex Postgres views and Excel-based tracking sheets, giving the entire company daily visibility into acquisition and delivery progress.
- Converted the company's web platform into a Progressive Web App (PWA) with offline functionality by implementing service workers, caching, and local data storage, enabling use in low-connectivity environments and reducing the need for separate native apps.
- Redesigned the platform's UI/UX, pushing its visual polish and usability to a level that opened discussions with external clients for commercialization.
- Led the restructuring of a legacy database schema (**20+ tables**), introducing normalized structures and standardized naming conventions while migrating **10,000+ records** with zero data loss.
- Modernized a legacy PHP codebase by refactoring outdated implementations and improving maintainability, enabling easier future development and feature integration.

Software Developer Intern, OGL Engineering (Python, React)

Feb 2025 - June 2025

- Developed a flight route optimization feature that maximized single-mission coverage, saving an estimated **\$5000+** in fuel/operations over the entire flying season.
- Formulated the planning problem as a TSP/VRP variant and solved it using Google OR-Tools.
- Integrated the optimization system into the existing flight planning workflow, automating what was previously a manual planning process.

Education

Southern Alberta Institute of Technology (GPA: 3.98)

- Relevant Coursework: Database Development, Java Programming for Object-Oriented Software Development, Web Application Development, .NET Web Applications, Security for Developers

University of Calgary – B.Sc. Astrophysics

- Relevant Coursework: Computational Physics I, II, III, Intro CPSC Multidisciplinary Study I, II

Projects

Playlist Sync Web Application | Next.js, Typescript, Python, Tailwind

- Developed a web application that allows users to transfer their Spotify playlist to their YouTube Music library
- Implemented OAuth 2.0 for authorization, allowing users to fetch and send playlists and songs between Spotify and YouTube Music

Technical Skills

- **Languages**: Python, TypeScript/JavaScript, PHP, C#, SQL, Java
- **Frameworks & Libraries**: Next.js, React, .NET, Tailwind CSS, TensorFlow, Keras, NumPy
- **Tools & Platforms**: Git, OAuth 2.0, Google OR-Tools, Service Workers/PWA, REST APIs, Docker
- **Databases**: Postgres/SQL
